Work Experience

WaveMaker India Private Limited

October 2024 – Present

Associate Development Engineer (Backend)

- Built **GitHub Apps**-based **VCS integration** supporting **enterprise GitHub organizations**, implementing **OAuth authorization**, **installation lifecycle management**, and **secure token generation** to eliminate reliance on long-lived credentials and enforce **least-privilege repository access**.
- Owned the backend implementation of **authentication**, **token lifecycle management**, and repository access services supporting project provisioning and VCS operations, collaborating with **cross-functional teams** in **Agile development cycles** and developing **unit/integration tests** to ensure reliable enterprise deployments.
- Built **backend integrations** and **domain-specific skills** for **AI-powered platform agents**, enabling natural-language management of VCS and security workflows while reducing **token consumption by ~30%** and improving response relevance through **optimized agent routing**.
- Developed an **automated migration platform** for transitioning customer applications from **WaveMaker Online (SaaS)** to **WaveMaker Enterprise**, reducing manual migration effort by **~95%** and successfully migrating **100+ production applications** and **800+ reusable components** with **zero data loss**.
- Implemented **topological dependency resolution**, **branch-aware import sequencing**, **role provisioning**, and **workflow orchestration** to enable reliable migration of complex multi-level application and prefab hierarchies.
- Designed and implemented a **multi-provider authentication framework** enabling customers to integrate **OpenID Connect**, **SAML**, **JWS**, **Opaque Token**, and **Database authentication** within a single application, providing a **unified security model** across diverse identity providers.
- Designed and implemented a **JWS-based cross-origin authentication solution** that enabled seamless **identity propagation** for embedded applications in **iframe environments**, overcoming browser-imposed **Microsoft SSO restrictions** through **secure token exchange** and verification workflows.
- Re-architected **platform-wide session management** by migrating from **database-backed cookie validation** to a **Redis-based distributed session store**, replacing synchronous **MySQL lookups** with **in-memory session retrieval** across **OpenID Connect**, **SAML**, **JWS**, and **Database** auth providers — reducing authentication latency by **~45%** while improving **scalability** and **fault tolerance** for multi-tenant workloads.

WaveMaker India Private Limited

July 2024 – September 2024

Software Engineering Intern

- Developed and delivered assigned frontend tasks on the low-code platform, including building interactive UI components and a functional to-do application, gaining hands-on experience with the platform's development workflows and internal tooling.

Skills

Languages: Java, Python, JavaScript, SQL, HTML, CSS

Frameworks: Spring, Spring Boot, Hibernate, Spring Security

Databases & Caching: MySQL, PostgreSQL, Redis, SQLite, JDBC

Auth & Security: OAuth 2.0, OpenID Connect, SAML, JWT, JWS, Opaque Tokens, Keycloak, SSO

DevOps & APIs: Docker, REST APIs, Microservices, API Gateway (Kong), Git, GitHub, GitLab, Linux

Concepts: System Design, Distributed Systems, SOLID Principles, Design Patterns, Multi-threading, DSA

Education

Amity University Online

2025 – 2027

MCA in Artificial Intelligence and Machine Learning

Ambedkar University

2021 – 2024

Bachelor of Science – Computer Science
